HW-1024D OVEN

product specifications

Note：

1) the curing oven   power jack must grounded.

2) If machine don't work,please send it back to factory for repairs.

3) Do not touch of heating, in case burn.

一、 Overview：

The multifunctional curing oven using industrial control chip, PID algorithm control temperature,can set temperature and time , the digital display temperature, a buzzer to alert. Provide good human-machine interface, effectively improve the curing speed.

二、 Parameter：

- Voltage:AC220V/50Hz，AC110V/60Hz
- Power:130W
- Control range:0~135℃
- Control percise：±1℃
- Timer range：1~99min 99seconds
- Machine Dimension：L 185×W 135×H 95mm
- Net weight：3KG
- Package dimension：L 300×W 245×H 160mm

三、 Machine instrcution：

Heating block

Heating light

Control panel

Timer seitch

Power Switch ，fuse, Power Socket

四、 Operation instruction：

1）Setting Time

Hold down theTIME key 2 seconds, can enter the time setting pattern, the digital will shine, press UP (+) key can increase the time in operation, press DN (-) key can reduce time in operation. Click on the TIME key, the exit temperature setting. In the time setting, if during 10 seconds, don't press key, automatic exit time setting. Note: after clock started, cann't set time and   temperature

2）Setting temperature

Hold down theTEMP key 2 seconds, can enter the temperature setting pattern, the digital will shine, press UP (+) key can increase the temperature in operation, press DN (-) key can reduce temperature in operation. Click on the TIME key, the exit temperature setting. In the time setting, if during 10 seconds, don't press key, automatic exit time setting. Note: after clock started, cann't set time and   temperature

3）Timer

When the press on the right of green button(计时开关), the timer start to count down,when the time duration reduced to 0, the buzzer will alert. Alarm,every 2 seconds,and alerting by B sound. When click again   green button, stop alert.

If you want to see the temperature,please press the TIME key the control panel will show the temperature.

4）View timer

Press the TIME key, the control panel will show the setting timer.

5)View temperature

Press the TEMP key ,the control panel will show the actual temperature.

4）Alert

When time duration reduced to 0, the buzzer alert, every 2 seconds will alet using B sound.can click any red button cancelled alert.

1.time show
2. temperature show

Increase key,when setting time to increase time and when setting temperature to increase temperature.

1.press 2 sec to set the timer
2.press 1 times the temperature interface switch to the timer interface

1.press 2 sec to set the timer
2.press 1 times the timer interface switch to the temperature interface

Reduce key, setting time to reduce time and when setting temperature to reduce temperature.
